CENTRO REGIONAL DE COCLÉ
FACULTAD DE INGENIERÍA DE SISTEMAS COMPUTACIONALES
LICENCIATURA EN CIBERSEGURIDAD

BASE DE DATOS SEGURAS

SMARTLINE-SMARTHOME

ESTUDIANTE:
JOHNNY RIVAS

PROFESOR:
ANTONIO CABALLERO

Guía Práctica: MongoDB + Python + Streamlit (Smart Home IoT)

1. Objetivo

Crear una base de datos MongoDB para un hogar inteligente, insertar datos desde Python y visualizar la información mediante un dashboard en Streamlit.

2. Crear la Base de Datos en MongoDB Compass

Abrir MongoDB Compass.

Conectarse a mongodb://localhost:27017

Crear la base de datos SmartHomeDB.

Crear la colección IoTData.

3. Instalar Librerías Python

pip3 install pymongo

pip3 install pandas

pip3 install streamlit

```

```

4. Script Python para Insertar Datos

```
from pymongo import MongoClient
from datetime import datetime
import random
```

```
client = MongoClient("mongodb://localhost:27017/")
db = client["SmartHomeDB"]
collection = db["IoTData"]
```

```
sensor = {
    "sensor_id": "TEMP001",
    "tipo": "Temperatura",
    "ubicacion": "Sala",
    "valor": random.randint(20,35),
    "fecha": datetime.now()
}
```

```
collection.insert_one(sensor)
print("Dato insertado")
```

A screenshot of a code editor with a dark theme. The editor shows a Python script for generating IoT data. The script includes imports for pymongo, datetime, and random. It connects to a MongoDB instance at localhost:27017, selects the 'SmartHomeDB' database and 'IoTData' collection. It defines a list of simulated sensors with their IDs, types, and locations. The script then iterates 500 times, generating random data for each sensor and inserting it into the collection. The terminal output shows the command prompt and the file path.

```
lot_generator.py x dashboard.py 2
D: > Base de Datos Segura > lot_generator.py > ...
1 from pymongo import MongoClient
2 from datetime import datetime, timedelta
3 import random
4
5 # Conexión a MongoDB
6 client = MongoClient("mongodb://localhost:27017/")
7 db = client["SmartHomeDB"]
8 collection = db["IoTData"]
9
10 # Sensores simulados
11 sensores = [
12     ("TEMP001", "Sala"),
13     ("TEMP002", "Cocina"),
14     ("TEMP003", "Habitacion"),
15     ("TEMP004", "Garaje")
16 ]
17
18 # Limpiar colección (opcional)
19 # collection.delete_many({})
20
21 documentos = []
22
23 fecha_base = datetime.now() - timedelta(hours=24)
24
25 for i in range(500):
26     sensor, ubicacion = random.choice(sensores)
27
28     documento = {
29         "sensor_id": sensor,
30         "tipo": "Temperatura",
31         "ubicacion": ubicacion,
32         "valor": random.randint(20, 35),
33         "fecha": fecha_base + timedelta(minutes=i*3)
34     }
35
36     documentos.append(documento)
37
38
```

5. Generación Continua de Datos

```
from pymongo import MongoClient
from datetime import datetime
import random
import time

client = MongoClient("mongodb://localhost:27017/")
db = client["SmartHomeDB"]
collection = db["IoTData"]

while True:
    dato = {
        "sensor_id": "TEMP001",
        "tipo": "Temperatura",
        "ubicacion": "Sala",
        "valor": random.randint(20,35),
        "fecha": datetime.now()
    }
    collection.insert_one(dato)
    print(dato)
    time.sleep(5)
```

7. Crear Dashboard con Streamlit

```

import streamlit as st
import pandas as pd
from pymongo import MongoClient

client = MongoClient("mongodb://localhost:27017/")
db = client["SmartHomeDB"]

datos = list(db.IoTData.find())
df = pd.DataFrame(datos)

st.title("Smart Home Dashboard")
st.metric("Total Registros", len(df))

if "valor" in df.columns:
    st.line_chart(df["valor"])

```

8. Ejecutar el Dashboard

Abrir una terminal en la carpeta del proyecto y ejecutar:
`python3 -m streamlit run dashboard.py`

540560580600620640660680700720740760780800

9. Arquitectura del Proyecto

Sensores IoT -> Python -> MongoDB -> MongoDB Compass -> Streamlit Dashboard

10. Actividades para los Estudiantes

Agregar sensores de humedad, movimiento y consumo eléctrico. Crear consultas de agregación y visualizar métricas en Streamlit.
